Run a Product Page Attribute Pass AI Will Recommend

Objective

Product and service pages that answer the narrow question a buyer asks an AI assistant: every feature and attribute written out plainly, plus who it's for, who it's not for, what it includes and what it doesn't. AI is now a recommendation layer between interest and purchase, and it often sends no click.

> *"Who's it for? Who's it not for? What does it include? What doesn't it include?" - Ernesto Ortiz, Structural SEO*

Key Steps

1. **Pick the pages that sell.** Product and service pages, highest revenue first. (order inferred)
2. **Pull every feature and attribute into one sheet:** one row per product, one column per attribute. (sheet inferred)
3. **Write each attribute out in plain words.** A spec table is not an explanation. "Just being extremely clear."
4. **Answer the four questions on every page,** each in its own short block.
5. **Write who it's NOT for** - "if it's clear." Never invent a limit.
6. **Turn "who it's for" into a specific use case** (homes with long winters, teams on a given analytics stack).
7. **Add bottom-of-funnel detail:** refunds, shipping, packaging. (Jeremy's addition)
8. **Check it like a buyer:** ask an AI assistant the narrow question, then check availability, pricing and reviews in Google. (log inferred)

Cautionary Notes

- No promised numbers. Ernesto reports "great results" without figures. Baseline each page first. (inferred)
- A wrong "not for" line costs sales. Skip it when unsure.
- Don't trust a rank tracker alone; automated results can differ from what humans see. Spot-check by hand.
- Search Console hides most long-tail queries (SEO Arcade dark-click study: mean 63.6%, median 72% of clicks).
- Measure conversions, not just sessions. (inferred)

Tips for Efficiency

- Draft attribute copy with AI; have a product expert check every claim. (review inferred)
- Run the same pass on service pages.
- Small niche brands that define their product clearly can show up above industry giants.
