Build a Question Map So AI Search Recommends You

Objective

A sheet of subject x situation x question type cells, the ones worth answering marked, and a publishing order. One honest page per cell, each saying something a page for another cell couldn't.

> *"the subject, the situation, and the question type, and then a real honest page for every cell worth answering." - Matt Goren, RunOctopus (recorded November 2026)*

Subject	Situation	Question type
Feeder insect product, for a species	Life stage, different setup	How many, how often, this versus that, is it legal in my state
Concrete walls (Pensacola example)	After a hurricane, winter vs summer, small vs big project	How much does it cost, how long to wait, who do I hire

Key Steps

1. **Write ten questions** customers would ask ChatGPT where you'd want to be the answer. Write them the way people talk. (phrasing inferred)
2. **List your subjects:** products or services, one per row.
3. **List the situations** each subject meets: species, life stage and setup for Matt's store; place, season, weather and job size for a local business.
4. **List the question types:** how many, how often, this versus that, is it legal in my state, why won't it work, cost, timing, who to hire.
5. **Cross the lists and keep the cells worth answering.** Cut what no customer asks. (inferred) Don't cut a cell for showing zero searches. Matt: "No, you should."
6. **Write one honest page per cell** on the real difference in that cell. No three-word swaps between winter and summer.
7. **Make the set navigable:** a hub per subject, links to its situation and question pages, links between sibling cells. (inferred)
8. **Check where you stand:** run the ten questions through ChatGPT and Claude by hand, study the Search Console clicks and query phrases you can see, then add the next ten. (cadence inferred)

Cautionary Notes

- Don't generate pages in one prompt and paste them up. Matt: "just not going to cut it."
- A page that only swaps the city or season is a cell to merge. (judgment)
- Have "is it legal in my state" pages checked for that state, and date them. (inferred)
- The 0 to 7,800 clicks result is Matt's on-tape figure for his own store. He sells software that builds these maps.
- Short pages won't carry it. Matt doesn't think even 1,000-word articles are enough anymore.

Tips for Efficiency

- One spreadsheet row per cell: subject, situation, question type, question, URL, status. (inferred)
- Ask the people who answer customers: installers, sales, your inbox. (inferred)
- Start with expensive jobs and thin competition. (inferred)
- Local is open ground: Matt says Starbucks never gets the coffee shop recommendation.
